

ID Logistics is one of the leading operators in the world delivering goods for the retail and textile industries. With the acquisition of Logiters, the company positioned itself as one of the largest operators in Spain and Portugal, extending their expertise to the automotive, pharmaceutical, healthcare and electronics industries. They are also expanding their presence globally as well, now operating more than 6 million square meters of warehousing facilities at 320 sites across seventeen countries in Europe, North America, South America, Asia and Africa. ID Logistics has over 22,000 employees globally and is headquartered in Orgeron, France.

ID Logistics, a leading name in logistics, and a customer-centric company

The company has been trusting IBM i and Power Systems for over 25 years, starting with the System/38. The majority of all transactions for ID Logistics run on IBM i, including a critical logistics application built in-house the company relies on to keep their operations running smoothly. Their main IBM i production environment in France is used to run applications for all other countries, so it is important to be on a platform they can rely on without having to worry about downtime or outages. The COVID-19 pandemic, however, brought along new challenges for ID Logistics like never seen before.

IBM Power Systems

The company migrated to Power Systems Virtual Server for their business-critical infrastructure and applications. The new environment in the cloud consists of Power Systems S922 running IBM i.

With the move to cloud, ID Logistics does not have to worry about maintaining high availability or security on their own, freeing their teams to focus on other business priorities during the pandemic. This has allowed the company to focus on their clients during a time where they need the most support.
